Technical description.

Crawler travel gear.

Frame:	Self-manufactured, torsion-resistant box-type design of high-tensile grain refined steel, comprising crawler centre section and two crawler carriers. The crawler carriers are pinned hydraulically.
Travel gear:	Maintenance-free, dirt-protected crawler travel gear with 3'11" (4'11" optional) track pads and centralized lubrication system for tumbler and track roller bearings.
Travel drive:	1 (optionally 2) hydraulic drives per crawler carrier, comprising axial piston variable displacement motor, planetary gear with spring-loaded, hydraulically releasable travel brake and tumbler. The crawler chains are controllable synchronously, independently and opposed to one another.
Central ballast:	94800 lbs, consisting of 2 slabs 12100 lbs each and 4 slabs 17600 lbs each.

Crane superstructure.

Frame:	Self-manufactured, torsion resistant weldment of high-tensile grain refined steel. Connected to crawler travel gear by a 3-row roller slewing rim for 360° continuous rotation.
Crane engine:	6-cylinder turbo-charged Liebherr Diesel engine, type D 9406 TI-E A3, water-cooled, output acc. to DIN 300 kW (408 h.p.) at 1900 min ⁻¹ , max. torque 1261 lbs/ft at 1400 min ⁻¹ . The engine corresponds to the EU directive 97/68/EG step II and is certified acc. to EPA/CARB and Tier 2. Fuel reservoir 185 gallons.
Crane drive:	Diesel-hydraulic by pump distribution gear with 4 axial piston variable displacement pumps with capacity control within closed oil circuits.
Crane control:	Servo-control with electronic synchronizing device by three four-way control levers and two two-way control levers (joy-stick type). Continuous control of the crane motions by variation of the hydraulic pumps, additionally by variation of the Diesel engine speed.
Winches 2 and 4:	Hydraulically driven cable drums by axial piston variable displacement motor and planetary gear with spring-loaded, hydraulically releasable static brake. Wearfree braking function during lowering by closed oil circuits. Winch 2 – hoist gear, winch 4 – derrick gear. Auxiliary winch for reeving of cables.
Slewing gear:	2 slewing gears (optionally 4), hydraulically powered by axial piston variable displacement motor and planetary gear with spring-loaded, hydraulically releasable static brake. Wearfree braking function by closed oil circuits.
Crane cabin:	Spacious, all-steel construction cabin, swivelling sideways and tiltable backwards, with operating and control instruments. Self-contained warm-water heating (optionally air-conditioning system).
Safety devices:	LICCON safe load indicator, hoist limit switches, electronic inclinometer, safety valves for the prevention of pipe and hose ruptures, anemometer.
Electrical system:	24 V DC, 2 batteries of 170 Ah each.
Superstructure ballast:	297700 lbs, consisting of 1 base slab of 33100 lbs and 12 slabs of 22000 lbs each.

Remarks referring to load charts.

1. When calculating crane stresses and loads, German Industrial Standards (DIN) are applicable, in conformity with new German legislation (published 2/85): The lifting capacities (stability margin) DIN/ISO are as laid down in DIN 15019, part 2, and ISO 4305. The crane's structural steel works is in accordance with DIN 15018, part 3. Design and construction of the crane comply with DIN 15018, part 2, and with F. E. M. regulations.
2. Lifting capacities are given in kips.
3. The weight of the hook blocks and hooks as well as of lifting tackle must be deducted from the lifting capacities.
4. Working radii are measured from the slewing centreline.
5. The subsoil must be even and of good bearing capacity.
6. Subject to modification of lifting capacities.
7. Lifting capacities above 770 kips only with special equipment.
8. The crane can be displaced with suspended loads as stated in the load charts. Operating conditions must conform to the rules in the operating instructions.

Lifting capacities are given in kips (1,000 lbs).
